## *Autonest System*

Auto nest is the modern equipment to automatically collect eggs. Its main function is to smoothly transfer the eggs to the egg collection table via a conveyor belt, without getting them dirty. This reduces labor cost, egg broken rate, and provides clean and high-quality eggs. This also improves the hatching rate. With humanized design, it provides quiet and comfortable laying environment for broiler, breeders and layers. The main layouts are as follows:

HIGH-LOW-HIGH MODEL

LOW-HIGH-LOW MODEL

## Design concept

- Big unit space, capable of accommodating 4-5.5 birds at the same time (8-10 birds at peak period).
- The bottom of nest feels soft and comfortable, and the nest has good ventilation design.
- The front red curtain attracts the birds to come laying and keep the nest isolated from outer environment at the same time.

## Reduce breakage rate and improve hatchability

- Needle-like padding keeps the egg from being polluted or damaged.
- The Conveyor belt is with square holes, which keeps the eggs stably transferred and avoid birds pecking.
- The square hole also provides a good ventilation effect, which elevate the brooding rate.

## Simple operation and durable service life

- Stable structure with high strength
- Simple operation, easy to learn
- Less routine maintenance

*Conveyor belt*

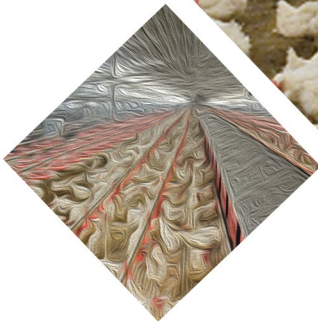

## ABOUT US

A duly registered Philippine Corporation primarily engaged in providing modern high quality equipment and pre-fabricated houses for poultry and livestock. MFC's partnership with industry leaders in the region and our dedicated support to customers enables us to become a benchmark of quality for providing agricultural products and services.
