And Modern Equipment for Poultry and Livestock*

Auto Harvest Cage System

The Multi-tier broiler cage system maximizes broiler efficiency from high quality environment and disease reduction resulting to cost efficiency in broiler production. Bird performance are remarkably improved and labor cost during production, harvest and cleaning are way below from conventional tunnel ventilated housing resulting to more profitability.

Main Feed Line

The simple, unique design of the main feed line can be actuated by the sub feed line control feed pan, making sure all broilers have sufficient amount of feeds.

Sub Feed Line

Specially designed broiler feed pan for multi-tier broiler cage system can be used from day old to harvest with less or minimal feed wastage.

Drinking Line

High quality drinking system minimize water leakage, which can supply birds with high water quality. Two drinking lines with 12 nipples per line ensure sufficient water supply.

Plastic Slat

Pliable slat which is specifically engineered for broiler use, avoids breast and feet injury. Scientifically designed to avoid different type of skin infections.

Manure Removing System

Automatic manure cleaning system, improve the air quality inside the broiler house and significantly reduced the ammonia level percentage. The manure belt is automatically cleaned by manure scraper thus resulting to lesser or NO FLY at all.
